

Harrison Canal and Irrigation Company Installations, Construction or Other Canal Changes Request

Subject: Diversion changes, new canal crossings for utilities, installation of structures and facilities for pumps, installation of bridges and other construction within the canal easement that may affect canal operations

I. Purpose

The Board of Directors have a responsibility to maintain the easement it holds for all stockholders of the canal company in a condition that does not diminish the canal company's ability to deliver water to its stockholders in a fair equitable and legal manner. Because of continuing development and construction alongside established easements held by the Harrison Canal and Irrigation Company, the Board of Directors hereby establish the following policies to provide guidelines to those who may feel it necessary to alter, change, cross, or in any way conduct activities within the canal easement.

II. Responsibility

The Board of Directors of the Harrison Canal & Irrigation Company are duly elected by the stockholders and are vested with the responsibility to maintain a working canal system for its stockholders.

III. Provisions

A. Pumps

1. New pump installations must first be approved by the board.
2. A one time fee of \$300 must be paid and a general description and layout plan provided for board approval. If not approved the fee is to be refunded.
3. All pump installations must have water in the amount of 120% of the amount the pump is capable of pumping to fairly and equitably divide water in times of short age. In lieu of excess water ownership, a locking control device may be required by board of directors. A flow meter may also be required.
4. All water deliveries through pumps are under direct supervision of the Water Master and the Board of Directors
5. New pump installations must be installed with proper authorization from land owners where the pumps will actually be situated. The Harrison Canal & Irrigation Company owns no land and cannot create easements for others.
6. The Harrison Canal & Irrigation Company is not responsible for damage to pumping equipment and facilities installed on the canal easement whether it is caused by maintenance of the canal or whatever the cause. By applying for a pump installation the applicant waives all claims for damage and assumes all risk to equipment placed in the canal easement.
